EHS&S Performance Excellence and Digital Advisory Services

ALIGNING PROGRAM ASPIRATIONS AND DIGITAL STRATEGIES

Many organizations are experiencing increased demand for transparency and insights on their Environmental, Health, Safety and Sustainability (EHS&S) performance and are looking to enhance their current programs and strategies. Improving organizational performance starts with understanding where you are in your journey and establishing EHS&S aspirations across your core team and key stakeholders.

Advisory Services & Management Consulting

Working with our clients and meeting them where they are on their journey is a cornerstone for TRC's EHS&S Performance Excellence consulting team. We help define multi-year business and digital strategies by engaging internal and external stakeholders to assess both program and digital maturity while identifying aspirational goals and targets. In doing so, our practitioners help establish clear roadmaps for program and digital transformation initiatives laying the groundwork for short and multi-year projects and related resource and budget planning.

Digital Support & Transformation

Additionally, with the continuous emergence of AI based solutions, it is critically important to have a combined EHS&S and Digital strategy to ensure that digital investments are optimized and that the power of AI can be effectively tailored and utilized to advance your EHS&S performance.

With years of experience working across industries our team helps clients establish and refine technology enablement strategies while supporting all aspects of the digital transformation lifecycle. We start by establishing business priority focus areas and desired outcomes and move to deeper dive assessments of each business functional area to understand the current state and perform future state functional system requirements and envisioning. Partnering with client IT organizations, our practitioners establish technical requirements to help ensure that any new potential solutions seamlessly integrate with IT's technology preferences and standards. We objectively help ascertain potential best fit market solutions for client consideration and support more formal Request for Proposal and vendor technology evaluation activities. Our overall goal is to help clients make the best, most cost-effective, decisions for their specific needs.

Once a technology/software path is chosen, TRC advocates and supports implementation planning and scoping sessions to lay the groundwork for realistic budget planning and resource requests. Finally, as projects move forward, our team supports customers through all aspects of software deployment and ongoing support and maintenance, including the establishment of communities of practice to help ensure user adoption and ongoing usability of the system.
